

Supplementary Information

Fig. S1. The *A. sagrei* invasion of Florida shows an exponential pattern of range expansion.

The number of counties in Florida with established populations of *A. sagrei* has increased exponentially from initial introductions in the 1880's to recently established populations in 2000's ($Y = 0.163e^{0.038x}$; $P < 0.0001$; $R^2 = 0.912$)^{S1}. Dates were taken from the Florida Fish and

Wildlife Conservation Commission's website

(<http://wld.fwc.state.fl.us/critters/exotics/SpeciesNumberResults.asp?SPPNO=25>) and verified in

the literature by the authors. Inconsistencies between the website and literature sources were

resolved in favor of the literature.

Fig. S2. Statistical parsimony networks connecting introduced and native-range haplotypes^{S2}.

Letters for each network correspond to native-range clades identified in Figs. 1 and 2. Each square is a unique haplotype with its size proportional to the haplotype's frequency; its color indicates the geographic origin of the sample, and black dots represent inferred mutational steps between haplotypes. The haplotype network from the Western Cuba clade (A) was divided into two sub-networks (1 & 2) to recognize the haplotype divergence within the network. All native-range haplotypes are from Cuba except for one haplotype from each of the Bahamas (F) and Belize (H). The one haplotype nested within the Bahamian clade (F) was too distantly related to the closest haplotypes sampled from San Salvador, Bahamas to form a haplotype network with 95% confidence.

Fig. S3. The histogram shows the frequency of mean pairwise mtDNA sequence divergences within populations for introduced Florida and native Cuban populations^{S1,S3}.

Table S1. Chronology of *A. sagrei* introductions to Jamaica, Florida (U.S.), Hawaii (U.S.), Grand Cayman, Taiwan, and Grenada with the approximate date of introduction and references for each locality. Dates for Florida were taken from the Florida Fish and Wildlife Conservation Commission's website (<http://wld.fwc.state.fl.us/critters/exotics/SpeciesNumberResults.asp?SPPNO=25>) and verified in the literature by the authors. Inconsistencies between the website and literature sources were resolved in favor of the literature.
